$ git log --graph bloodborne

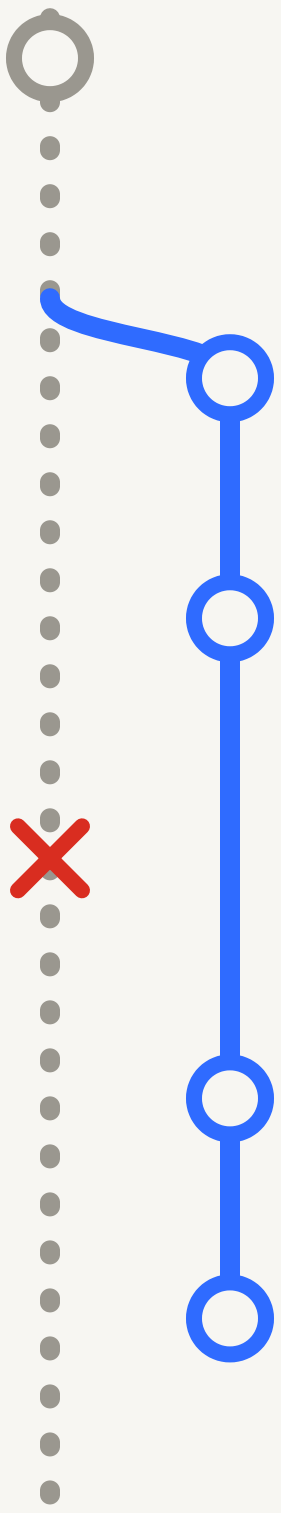

Sony was greedy and selfish, so Bloodborne was stuck on PS4 for a decade.

Then Claude helped one fan bring it to PC.

$ git log --graph sony shadps4

Sony's branch went quiet. The fans' didn't.

Mar 2015
Bloodborne ships: PS4 only, 30 fps

Oct 2022
George Moralis starts shadPS4, open source

Jul–Aug 2024
Bloodborne boots, then goes in-game

Jan 2025
fan 60 fps patch pulled after a Sony-side complaint

Jan 2025
"very playable" with mods

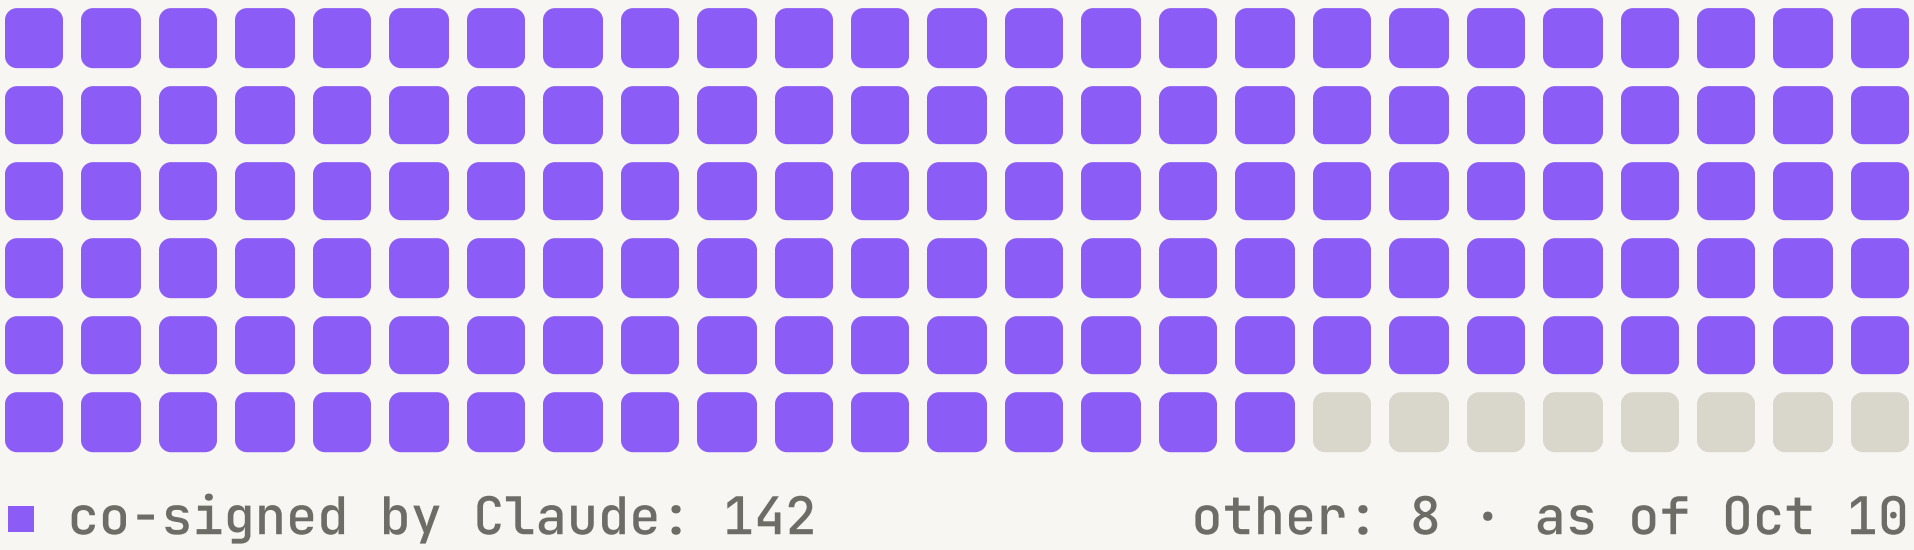

Jan 2026
60 fps, tested by Digital Foundry

sony: still no official PC port

sony (2015, then silence) shadPS4, built by humans

```
$ git shortlog bbport --co-authors
```

Oct 2026: one fan, Claude Code, and 142 of 150 commits.

01 PS4 and PC chips speak the same language, so the game's code runs directly on your CPU.

02 A ~5k-line runtime stands in for the PS4's operating system.

03 Graphics reuse shadPS4's renderer, heavily modified.

> The developer: `"I use Claude Code; it generates the code and runs checks."`

```
$ git log --all --since=2026-10-01
```

Then the floodgates opened.

Oct 4
bbport: Bloodborne runs natively on PC

Oct 7
bbhost: online co-op and PvP via a fan server

Oct 2026
Paleblood: rebuilding the source, 157,757 pieces

Oct 2026
P.T. and Modern Warfare 2 rebuilt with AI help

```
CONFLICT (content): fans vs AI-built ports
```

> **"I will just use the emulator made by humans."**
>
> a fan, quoted by GamesRadar · others called it "AI slop"

```
$ git merge shadps4 --into bbport
```

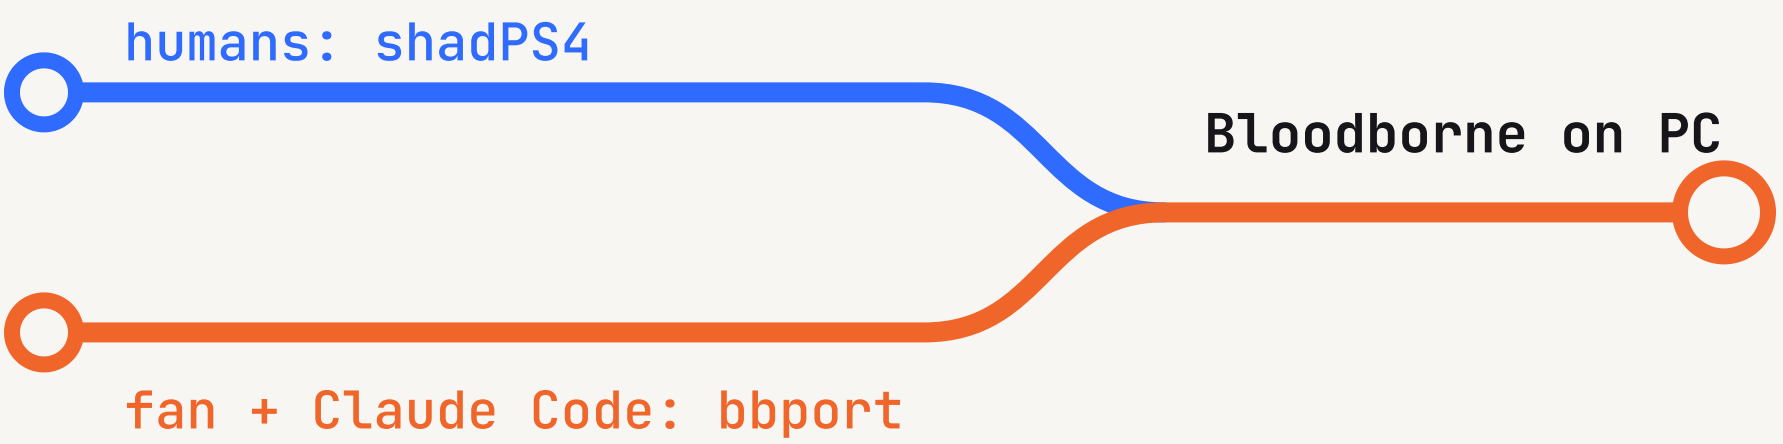

Claude wrote the commits. Humans drew the map.

"Without shadPS4 there would be no bbport."

the bbport developer

- → AI is fastest where people already did the hard thinking.
- → Every one of these ports needs your own copy of the game.
